

How many Black-Cockatoos have you got at your place?

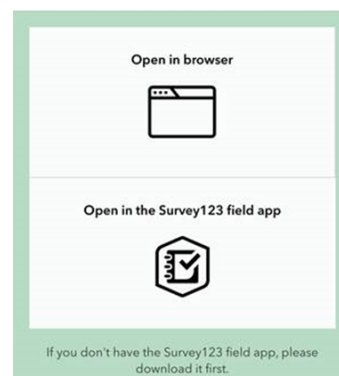

We are asking community members to report their sightings using a simple smart device application. This will enable us to identify their nesting, foraging and roosting sites and work to protect them so that each year the mating pairs can return to breed. They visit the Wheatbelt between July and March, so we're trying to get as many sightings recorded before they leave again.

WA Black-Cockatoos Survey123

1. Start by downloading the app:

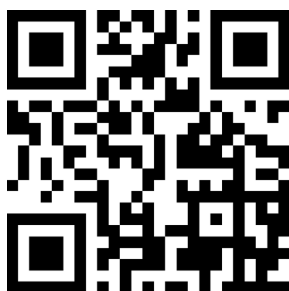

3. The link will take you to the following website:

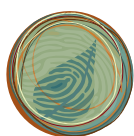

2. Once you have downloaded that then follow the link for the Black-Cockatoo survey on our webpage (<http://wheatbeltnrm.org.au/survey123>) or you can find it by searching Survey123) or by scanning the QR Code with your phone or tablet camera.

WA Black-Cockatoo Recorder: <https://arcg.is/0q8D8H>

4. If you click on the bottom link (open in the Survey123 field app) it will open up in the app you have downloaded and you can complete the survey from there.

If you have any questions, or would like assistance with downloading or using the app please contact us at agriffiths@wheatbeltnrm.org.au or 9670 3102.
